

Integral Mounting of Proximity Switches

- Operates off ferrous, magnetic or inductive target mounted on the yoke
- Top works remain free for other accessory mounting or clear for low installation heights.
- Available on most models of B, C, S, or HP Morin actuators

Morin Proximity Switch Preparation Option offers end of stroke indication without using the normal top mount position on the actuator. The option comes with drilled housing for both ends of stroke and the required targets mounted on the yoke ready for customer installation of their preferred cartridge style proximity switch.
